

Small-scale Residential Dementia Care Settings in Australia – Where are they and what are the characteristics of care?

Project aim This project seeks to explore where small-scale residential dementia care settings are located in Australia and what are the characteristics of care?

Project overview Small-scale residential dementia care settings are defined as residential care settings that are not large-scale care facilities. They are typically smaller in size and often provide a more homelike environment. This project aims to explore where these settings are located in Australia and what are the characteristics of care. The project will investigate the geographical distribution of small-scale residential dementia care settings across Australia, including the number of settings, their locations, and the types of care provided. The project will also explore the characteristics of care, such as the quality of care, the staff-to-resident ratio, and the types of activities and services provided. The project will use a combination of quantitative and qualitative methods to gather data. The project will also explore the challenges and opportunities associated with small-scale residential dementia care settings. The project will provide a comprehensive overview of small-scale residential dementia care settings in Australia and will contribute to the understanding of the characteristics of care in these settings.

The project will investigate the geographical distribution of small-scale residential dementia care settings across Australia, including the number of settings, their locations, and the types of care provided.
